# Facts About Oak Trees:

1. Oak Trees can be 150 feet tall
2. Oak Trees are thought to be the oldest trees on the planet. They protect their acorns with a coating of tannic acid on a hard exterior shell
3. Oak Trees often live 1,000 years and there is one in Mandeville, Louisiana that is 1,500 years old. They reproduce for over 700 years
4. An Oak Tree produces about 10 million acorns during its lifetime. They are the main source of food for many kinds of birds. Deer, bears, pigs, and other mammals consume acorns.
5. There are over 600 kinds of Oak Trees
6. For reasons that science can't explain, truffles will not grow unless Oak Trees are present.
7. Only 1 in 10,000 acorns actually becomes an oak tree
8. Most of the new lands discovered, like America, were in boats made from Oak Trees
9. Many of our favorite beverages derive a large portion of their flavor from the Oak Tree.
10. The Bible utilizes Oak Trees as a metaphor for what Adonai is producing in Believing Mankind

As long as fires are not intense infernos, most oaks will survive them. Oaks have very thick bark that is resistant to heat and safeguards the vital cambium cell layer that girdles a tree right under the bark. Evidence suggests that fire scars may even help protect the trees from invasive fungus. How? Some oaks develop tyloses. These are fast-growing cells that effectively block off the damaged parts and isolate them. And even if all the leaves are burned off in a spring fire, oaks can totally regrow the leaves by summer's end. Occasionally a tree is burned completely to the ground, but with the extensive root system still intact. The next year multiple shoots emerge like a flock of woody phoenixes rising from the ashes.

Bark inclusion leading to rot
